SAFE ZONE The new IXIO-DT1 sensor uses radar and infrared technology to provide activation and safety presence detection for linear, telescopic and curved pedestrian sliding doors. It uses a unidirectional sensing capability to reduce hold-open time and infrared detection to stop the door from closing too soon. **BEA • www.beainc.com**

SURGICAL SAVIOR

Mobile surgery units are surgical hospitals on wheels that can be set up by two people to be fully functional in one hour, making them ideal for facilities undergoing renovations, managing capacity issues or for disaster readiness situations. The health care code-compliant units are suitable for a wide range of surgical applications.
