HANDS-FREE OPERATION

The new Magic Switch 21 (MS21) is a stainless steel, corrosion-free activation plate that offers safe and sanitary operation of automatic doors. The MS21 initiates the opening cycle of a door with the wave of a user's hand, requiring no physical contact and limiting the spread of germs and other cross-contaminants.

» ON OUR RADAR «

TOUCHLESS DESIGN To wash their hands, users of the Advocate AV-Series 1 station move from left to right, beginning with a touchless soap dispenser, a touchless faucet, and finishing with a high-efficiency, dual-sided hand dryer. The all-in-one design simplifies hand washing, minimizes washroom cleaning and maintenance, and helps create a safer restroom environment.

SIMPLY EFFICIENT The EC-3122 is the newest above-deck electronic sensor faucet model in the company's ChekPoint sensor faucet line. Water- and energy-saving features include a water shut-off delay, auto timeout, sensor range adjustability and auto flush. Other features include a manual mixing valve built into the faucet body and 2.2-gpm aerator flow rate.

T&S Brass • www.tsbrass.com

SOOTHING RELIEF The company's newest eyewash faucet model combines a faucet with an independently operated eyewash. Two separate water supplies built within the unit ensure that cold to tepid water is supplied to the eyewash. The users lift the designated lever to receive soothing, temperature-controlled, aerated water into their eyes.

VERSATILE OPERATION The bedpan washer works by diverting a portion of the flush valve's water volume to the spray head. It operates with as little as 1.28 gallons of water per flush when combined with the company's high-efficiency, piston-operated flush valve. The flow of water begins when the arm is rotated approximately 60 degrees from vertical. A counter-balanced pivot assembly ensures that the spray arm stays in position when the user lets go, eliminating readjustment.
