

RIISING TO THE OCCASION This adjustable wall-mounting bracket system allows toilets to be easily adjusted in height. Introduced as an enhancement to the company's Select series of bathroom fixtures, the new adjustable brackets permit users to easily change a toilet's elevation by up to approximately 15 inches. This helps to overcome the limitations of certain clinical conditions and allows disabled or wheelchair-bound individuals to bring wheelchair and toilet to the same level.

HELP ON THE WAY The IP1500 and IP2500 VoIP emergency speakerphones are designed for a wide range of indoor and outdoor locations such as hallways, stairwells, parking facilities, elevators and door entries. Available as lightweight surface and flush mounts that are vandal-, UV- and weather-resistant, they offer full-duplex Session Initiation Protocol functionality and provide clear sound for both the caller and operator. The units are ADA-compliant, FCC-certified and Cisco-compatible.

RELIABLE TRANSPORTATION The company has introduced a new line of 4- and 6-inch pneumatic tube system carriers. The carriers incorporate user-inspired features that improve ease of use, reliability and simple maintenance. In addition to the standard clear, clamshell design, the vendor offers a wide variety of colored and half-colored carriers as well.

WALLS OF DISTINCTION DIRTT walls are customized to each customer's needs and are prefabricated. The walls can be adjusted to the room needs and can be made larger or smaller without having to break down drywall, resulting in less waste. Customers use the DIRTT 3-D design software — ICE software — to customize their design. The design is then sent directly to one of DIRTT's three manufacturing plants in North America to build the walls and other elements.

TAKING THE HEAT The 93PM UPS power management system features flexible deployment options that support integrated thermal management solutions. The system has a compact footprint that is said to be 35 percent smaller than competitive units, offering efficiency up to 99 percent and simplified energy-management features. The system can be strategically deployed and scaled to meet the needs of nearly any critical application.

EFFICIENCY BOOST The TLE Series uninterruptible power supply provides mission-critical facilities such as data centers and health care facilities with the broadest range of double-conversion output power — ranging up to 1.5 megawatts in a single module. The transformerless, three-phase UPS applies GE's technology to provide facilities with improved operating efficiencies — up to 97 percent in double-conversion mode and up to 99 percent in eBoost, also known as multimode operation.

RELIABLE POWER The enhanced VDC-XE flywheel system delivers clean, reliable power continuously, even during power outages. The system's extended run time of 30 to 40 seconds allows several standby engine generators to start and synchronize while the VDC-XE transfers power to the generators. The flywheel also reduces ongoing energy costs and operating costs over the life of the installation.

REMOTE MONITORING Designed for health care applications, the PowerCommand 500/550 remote monitoring system provides a Web-based means of remotely monitoring and controlling on-site generator sets, transfer switches and more from any PC or Mac. Multiple authorized users can remotely determine the status of a power system from anywhere, reducing the need for costly service calls and site visits. Model 500 can control two on-site devices while Model 550 can control up to 12 devices.

CLEAR SIGNS The InfoLock patient information system facilitates clear, unambiguous signage in a secure manner, ensuring that only designated hospital personnel control the messages. The system features a concealed locking mechanism for security and user-updatable inserts. The system is ADA-compliant, and standard and custom message bands are available. Decorative finishes and custom graphics are also available.

READY FOR CHANGE Contego modular signs can be changed easily within minutes with its Quick Pins, which can be unlocked with a flat-head screwdriver. The Quick Pins are strategically placed out of sight on the aluminum frame to deter vandals as well as to maintain a clean, uninterrupted message. Contego is available in a wide variety of shapes and sizes, from simple door numbers to large, two-column directory signs. Inserts are available, including ADA-compliant options.
