RESTART READY Magnitude WME chillers with RapidRestore technology restart 35 seconds after a power failure and reach 80 percent of full load in 75 seconds. Because there are no conventional bearings and no oil management system or associated maintenance costs, it is designed to deliver a lower cost of ownership compared with conventional centrifugal chillers.

EASY WASH New bedpan washer diverts a portion of the flush valve's water volume to the spray head. It can operate effectively with as little as 1.28 gallons of water per flush, when combined with a high-efficiency American Standard piston-operated flush valve. A special counterbalanced pivot assembly ensures that the spray arm will stay in position when the user lets go.
