

GET CONNECTED Version 3.0 of the Data Manager for the Energy Efficiency Education Dashboard can gather real-time data from multiple buildings across multiple locations, allowing hospitals to see key performance indicators at all times. Data can be accessed through on-site kiosks, touchscreens and via the Web or mobile devices. **QA Graphics • www.qagraphics.com**

VISUAL AID The DCS1800 high-performance wireless recording video borescope system enables quick and precise visual inspection of inaccessible or hazardous areas of complex machinery, equipment and systems without the need for disassembly or teardown. More than 15 probes are available.

GOING UP? The 400A elevator operates without a machine room or control closet, which allows more usable space and more passengers for each trip. It consumes up to 40 percent less energy than standard elevators with use of high-efficiency AC gearless machines. It features a smooth ride with less noise, making it ideal for hospitals. It is easily and quickly installed within a simple hoistway.

CLEAN FIGHT Germicidal wipes and disinfectant towels are part of a *Clostridium difficile* prevention kit with a protocol and checklist for terminal cleaning isolation rooms. The kit includes a calculator, and infection prevention training and education videos. For a free kit, visit www.cloroxprofessional.com/industry/health/knowledge-expertise/c-difficile-prevention/. **Clorox** • www.cloroxprofessional.com

EFFICIENT ACTION

The Q-10 Suite bio-decontamination system provides rapid, consistent eradication of pathogens from any health care environment by utilizing hydrogen peroxide vapor technology. The system reduces health care-associated infection rates, as verified by inactivation of 6-log *Geobacillus stearothermophilus* biological indicators.

WIPE OUT The Kimberly-Clark Wettask disinfection system consists of dry wipers that are dispensed from a closed canister. The wipers are designed for use with quaternary amines, bleach and other disinfectants that can be added to it. The design ensures that the solution is released onto the surface instead of binding to the wiper fiber.
