## Lee Health Coconut Point

This health and wellness destination for residents of Florida offers a broad array of medical services across the continuum of care in a pleasing campus environment / retail setting to create an enhanced patient experience and healing environment. Significant growth in the senior population is accelerating the demand for multi-specialty care in the area, including chronic care management and focus on healthy lifestyles.

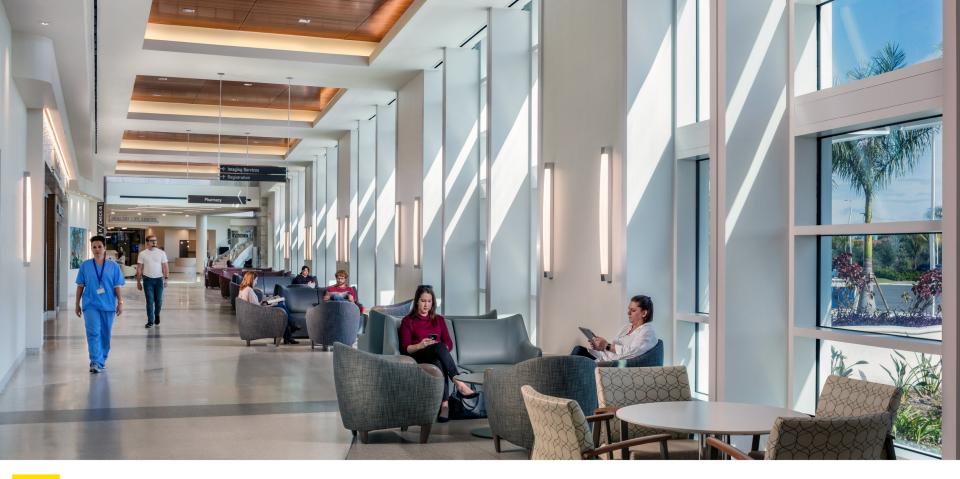

The central organizing feature for the facility and the site is the tower at the main entry. It provides a strong visual marker for the site, aiding wayfinding to the building lobby.

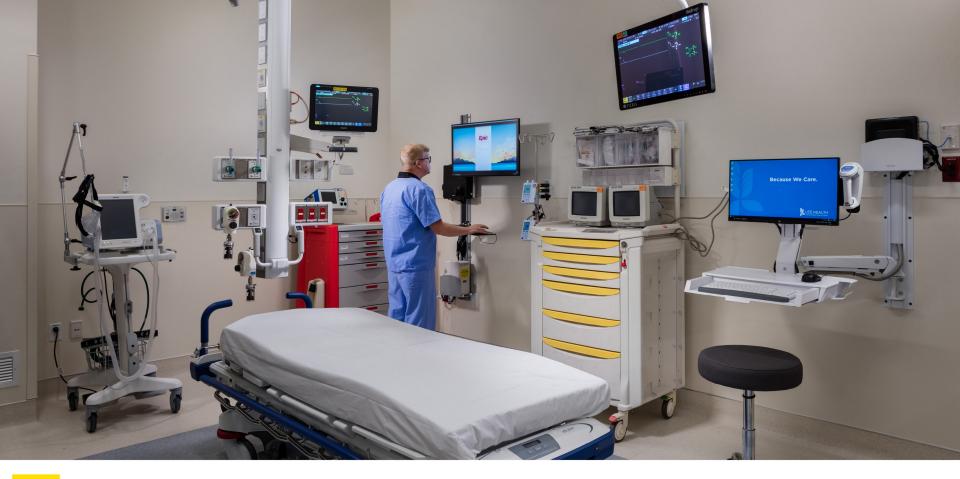

An esplanade links to walking paths, an outdoor pavilion, and a parking area that is structured to be used for public events such as farmers' markets and art fairs.

The light-filled promenade connects the central lobby and free-standing Emergency Department.

The emergency department houses 16 exam rooms and nine short-stay observation rooms for patients who need additional care.

Flexible therapy space provides a multi-purpose environment for outpatient rehabilitation.

Outpatient surgeries are performed at Lee Health which means patients arrive and leave within the same day.

The Health Life Center provides holistic health and care coordination services.

Open views promote intuitive wayfinding and access to amenities.
